

Shapes

Punching and calibrating design possibilities

Would you like to know more about our solutions?

HEATRAPLATES®

We take the heat off

Roll-bond technology for advanced applications

Roll-bond technology is known by its high heat transfer coefficient between surface plate and heat transfer medium and therefore it's used in high efficient applications. Our fully customizable products offer reliable, lightweight, scalable and cost-efficient solution for your application.

Endless designing possibilities

The production technology enables broad design varieties of channelling, shapes and sizes, plate design, connectors and attachments, making the roll bond suitable for any type of use requested by customers.

Connection possibilities

We have more than 60 years of experiences

in production of evaporators and heat transfer plates, which are integrated into household and commercial refrigerators/freezers, belonging to the most energy efficient class of appliances.

Your solution partner

In cooperation with customers we develop and manufacture heat transfer plates for solar absorbers, condensers for domestic hot water heat pumps, hybrid photovoltaic panels, heat transfer plates for battery cooling applications, construction industry as radiant panels applicable for heating/cooling and heat exchangers for other applications.

“Contribute to the environment with a sustainable aluminum products.”
